Summary

I build systems that make LLM outputs trustworthy and verifiable – multi-agent verification pipelines, human-in-the-loop evaluation, and failure-mode detection in production LLMs.

Education

SRM Institute of Science and Technology — Kattankulathur, Chennai
B.Tech in Computer Science and Engineering – AI/ML Specialization — *June 2022 – August 2026*

- CGPA: 8.1 / 10

Experience

NIIT Limited — Gurugram, Haryana
Associate Software Engineer – AI — *August 2026 – Present*

- Building features for **CxP**, a multi-tenant L&D platform for client-configured training programs; working across the **PostgreSQL** schema, API server, and admin application
- Prototyping **LLM-driven configurability** with **Flowise** to make training workflows adaptable per tenant
- ***Stack:*** *Python, PostgreSQL, Flowise, REST APIs, Claude Code*

DRDO — DYSL-AI Lab — Bengaluru, Karnataka
AI Research Intern — *January 2026 – July 2026*

- Engineered an automated Python pipeline (yt-dlp, ffmpeg, ytmusicapi) for 600-song audio dataset curation, **achieving 48× speedup per-row and saving 33 hours of manual work**
- Designed a data quality **system detecting 19.7% broken records** and auto-correcting 60%, **reducing the manual review from 100% to 7.9% of the dataset**
- Evaluated three audio LLMs (**SALMONN-7B, Audio Flamingo Next, Qwen2-Audio**) on the dataset for gender classification and comparative model analysis
- ***Stack:*** *Python, PyTorch, HuggingFace, Data Pipelines, Vector Search, Audio Processing, Model Evaluation, Multi-GPU*

Projects

Memory AI – Persistent RAG Assistant — Live Demo

- Developed AI chatbot with persistent memory using **embedding-based retrieval** across the chat sessions
- Deployed full-stack application (**React 18 + FastAPI**) on **GCP with Firestore** for context storage; enabled multi-turn dialogues via **cosine similarity search**

Multi-Agent Bias Audit Pipeline — GitHub

- Implemented a closed-loop verification system detecting, correcting, and re-verifying biased language across 4 demographic categories using a **4-agent chain** (Generator → Auditor → Refiner → Verifier)
- Translated **IEEE (2024) research on Multi-Agent Bias Mitigation via Self-Correction Frameworks** into a production pipeline

Certifications & Achievements

- **Publication:** Coral Reef Health Classification using ResNeSt-50 with Cross-Spatial Attention – **92.4% accuracy** on 7,384 images, outperforming ResNet-50 and ResNeXt-50; **accepted at ICCBI 2026**
- **Google Cloud / DeepMind:** Engineer AI Agents with ADK | Train a Small Language Model | Intro to GenAI
- **AWS Academy:** Machine Learning Foundations | Cloud Operations

Technical Skills

Generative AI: LLMs, RAG, Multi-Agent Systems, LLM Orchestration, Prompt Engineering, Model Evaluation
AI Frameworks & Tools: PyTorch, HuggingFace Transformers, Ollama, Flowise, Claude Code
Data & Retrieval: PostgreSQL, Data Pipelines, Vector Embeddings, Vector Search, Image & Audio Processing
Cloud & Deployment: GCP, Cloud Run, FastAPI, REST APIs, Docker, Firestore
Languages & Tools: Python, SQL, Linux, Bash, Git, pgAdmin
